

Carlisle Roof Foam and Coatings (CRFC) Supply Chain and COVID-19 Communication

As the impact of the Novel Coronavirus (COVID-19) continues to expand in the US, Carlisle Construction Materials (CCM) has received several inquiries about its ability to supply construction products with its roofing and building envelope products. This update is being provided to address those concerns.

Products sold by CCM in North America are made in the United States. The vast majority of CCM's raw materials are sourced domestically, through multiple suppliers. The few raw materials sourced internationally have backup domestic sources that can be used in the event of a shortage or shipping delays. While the situation is of course fluid, at this time CCM does not anticipate any significant delays or interruptions to its supply of raw materials or finished goods.

CCM is ready for a busy year of roofing activity; we are in a very strong inventory position, factories are running and warehouses are shipping. CCM's manufacturing, sales, procurement, logistics, and field service teams are working proactively to ensure all projects can proceed without delay. As a company, CCM is committed to providing its customers with the same high levels of service and support they've come to expect, regardless of what external challenges may arise.

CCM will continue to provide updates on this evolving situation as they become available. For the latest news about COVID-19 and more information about preventing the spread of illness in your community, visit www.cdc.gov.

Thank you for your continued support and confidence in Carlisle Roof Foam and Coatings products.

Sustainable. Seamless. Solutions.
