

Seal-Tek Micro Fibers

Carlisle Roof Foam and Coatings (CRFC) has been successfully supplying markets the Seal-Tek Micro Fibers product packaged in a 5 pound box for over five years. This product will now only be made available in this packaging configuration. The Seal-Tek Micro Fibers product was also previously available packaged in a 3.8 pound pail.

The 5 pound cardboard box, featuring an inner plastic bag containing the micro fibers, is beneficial for both distributors and end users for shipping, handling, and storage. A full pallet of Seal-Tek Micro Fibers consists of 40 boxes, totaling 200 pounds.

Precaution should be taken to avoid leaving this product where it can get wet.

Seal-Tek Micro Fibers are used as a thickening and reinforcing additive for both silicone and acrylic coatings to create a variable viscosity mastic material for detailing, sealing, and repairs. Helpful mixing instructions for different grades of mastic applications can be found in the updated PDS available on www.CarlisleRFC.com. For additional product information, please contact your local sales representative.

Sincerely,

Bruce Schenke
Product Manager
